Price: \$47.19

Ex Tax: \$42.90

Short Description

CD3 is a granular powder that accelerates the composting of most domestic organic solid waste material including household yard and garden wastes.

Description

SORRY! OUT OF STOCK

CD3 is a granular powder that accelerates the composting of most domestic organic solid waste material including household yard and garden wastes. CD3 is equally effective on large scale composting operations such as windrows or in small backyard efforts.

Compost Dynmaite is a unique combination of microbes, molds and yeasts, which all occur naturally in soil and compost but in smaller numbers. CD3 includes organisms specially selected to degrade tough, fibrous materials such as palm fronds and coconut husks.
